# SchoolNova, Math 5b <br> Homework 18 <br> Triangles - Part III <br> March 31, 2019 

Please provide sufficient details about how you solved the problem. More difficult problems are marked with a *. If unable to solve a problem, please present your thoughts and any partial solution.
In the following problems, you will be utilizing any of the SSS, SAS, ASA and AAS Postulates for congruent triangles.

1. Given that $\overline{A D} \| \overline{E C}$ and $\overline{B D} \cong \overline{B C}$, show that $\triangle A B D \cong \triangle E B C$.

2. Given $\overline{V X} \cong \overline{X Y}, \overline{X W} \cong \overline{Y Z}$ and $\overline{X W} \| \overline{Y Z}$, show that $\triangle V X W \cong \triangle X Y Z$.

3. Given $\angle T Q S \cong \angle R S Q$ and $\angle R \cong \angle T$, show that $\triangle T Q S \cong \triangle R S Q$.

4. Given $\overline{V W} \cong \overline{U W}$ and $\angle X \cong \angle Z$, show that $\triangle X W V \cong \triangle Z W U$.

5. Using equilateral and isosceles triangle properties, determine $m \angle x$ and $m \angle y$ in the following figure:

6.     * Describe how to show that $\triangle P M O \cong \triangle P M N$ using the SSS Congruence Postulate. Then find a way to show that the triangles are congruent using the SAS Congruence Postulate You may not use protractor to measure any angles. Compare the two methods. Which do you prefer? Why?

7. Find the area of the following triangles using the expression Area $=\frac{1}{2}$ base $\times$ height.

8. Use Pythagorean Theorem to determine the length of the hypotenuse in the following right triangle:
