## Classes of chemical compounds -1

A. Reactions where acids and bases react with each other are called reactions of neutralization. In these reactions a salt and water are formed. E.g. below is a neutralization reaction between hydrochloric acid ( HCl - acid) and sodium hydroxide ( NaOH - base) with formation of salt (sodium chloride, NaCl ) and water:

$$
\mathrm{HCl}+\mathrm{NaOH} \rightarrow \mathrm{NaCl}+\mathrm{H}_{2} \mathrm{O}
$$

B. When acidic oxides react with water, they form acids. E.g.:

$$
\mathrm{SO}_{3}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{H}_{2} \mathrm{SO}_{4}
$$

C. When basic oxides react with water, they form bases. E.g.:

$$
\mathrm{CaO}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{Ca}(\mathrm{OH})_{2}
$$

1. What salts form in the following reactions of neutralization:

$$
\begin{gathered}
\mathrm{KOH}+\mathrm{HBr} \rightarrow ?+\mathrm{H}_{2} \mathrm{O} \\
\mathrm{HF}+\mathrm{LiOH} \rightarrow ?+\mathrm{H}_{2} \mathrm{O} \\
2 \mathrm{NaOH}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow ?++2 \mathrm{H}_{2} \mathrm{O}
\end{gathered}
$$

2. How many grams of calcium sulfate $\left(\mathrm{CaSO}_{4}\right)$ will form in the neutralization reaction of 7.4 g of calcium hydroxide $\left[\mathrm{Ca}(\mathrm{OH})_{2}\right]$ with an excess of sulfuric acid $\left(\mathrm{H}_{2} \mathrm{SO}_{4}\right)$ according to the following reaction:
$\mathrm{Ca}(\mathrm{OH})_{2}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{CaSO}_{4}$ (solid) $+2 \mathrm{H}_{2} \mathrm{O}$ ?
3. Write down chemical reactions of the following oxides with water: $\mathrm{BaO}, \mathrm{L}_{2} \mathrm{O}, \mathrm{N}_{2} \mathrm{O}_{3}$, and $\mathrm{SeO}_{3}$.
