## Universal Law of Gravitation

Any two objects with mass are going to feel a gravitational attraction to each other. The force that they will feel is given by Newton's Universal Law of Gravitation.

$$
\mathrm{F}_{\mathrm{G}}=\mathrm{G} \frac{\mathrm{~m}_{1} \mathrm{~m}_{2}}{\mathrm{r}^{2}}
$$

$$
\mathrm{G}=6.67 \times 10^{-11} \mathrm{~N} \frac{\mathrm{~m}^{2}}{\mathrm{~kg}^{2}}
$$

## Homework

The objective of this week's homework is for you to remember how to work with numbers in the scientific notation, as we will be using them a lot in the next few classes.

Problem 1. Carry out the following operations and express the result in scientific notation:
$\left(3.1 \times 10^{2} \mathrm{~kg} \frac{\mathrm{~m}}{\mathrm{~s}^{2}}\right) \times\left(8.7 \times 10^{3} \mathrm{~s}\right)=$
$\left(8 \times 10^{3} J\right) \times\left(2.2 \times 10^{-2} s\right)=$
$\frac{5.4 \times 10^{3} \mathrm{~m}}{2.2 \times 10^{2} \mathrm{~s}}=$
$\frac{1.5 \times 10^{5} \mathrm{~N}}{5.1 \times 10^{-5} \mathrm{~kg}}=$
