
PLEASE SUBMIT YOUR WORK THROUGH GOOGLE CLASSROOM

For each question, give a detailed explanation.

1. If you **look through an ordinary window** during **daytime**, you see what's **outside**. At **night**, you clearly see your own **reflection**. Try this at home 😊

Question: Why? Think and **explain the science behind both cases**.

2. **What can you do to better see what's outside (from inside!) when it's dark?** (you can do two things actually 😊 try to guess both!)
