## Geometry. Vectors.

Please, complete problems from the previous homework assignment. Review the classwork handout on vectors. Solve the following problems.

1. Using vectors, prove that the altitudes of an arbitrary triangle $A B C$ are concurrent (cross at the same point H).
2. Using vectors, prove that the bisectors of an arbitrary triangle ABC are concurrent (cross at the same point 0 ).
3. Using vectors, prove Ceva's theorem.
4. Let $A B C D$ be a square with side $a$. Point $P$ satisfies the condition, $\overrightarrow{P A}+$ $3 \overrightarrow{P B}+3 \overrightarrow{P C}+\overrightarrow{P D}=0$. Find the distance between $P$ and the centre of the square, $O$.
5. Let $O$ and $O^{\prime}$ be the centroids (medians crossing points) of triangles $A B C$ and $A^{\prime} B^{\prime} C^{\prime}$, respectively. Prove that, $\overrightarrow{O O^{\prime}}=\frac{1}{3}\left(\overrightarrow{A A^{\prime}}+\overrightarrow{B B^{\prime}}+\overrightarrow{C C^{\prime}}\right)$.
