1. We don't normally *see* sound, we *hear* it, don't we? 😊  
Invented by German physicist Heinrich Rubens in 1905, "Rubens' Tube" is an impressive physical demonstration that helps *visualize* sound waves.  
Watch it at <https://www.youtube.com/watch?v=1ZcOusmB4Ls>  
(the direct link is also provided in the Classroom).
2. Answer the question below:
  - a. What is Rubens' Tube used for?
  - b. What do you need to make one (don't try this at home)?
  - c. What parameter of a sound wave is responsible for its pitch?
  - d. How is that shown in the demonstration?
  - e. What parameter of a sound wave is responsible for its volume/loudness?
  - f. How is that shown in the demonstration?
