PLEASE SUBMIT YOUR WORK THROUGH GOOGLE CLASSROOM

For each question, give a detailed explanation.

1. If you **look through an ordinary window** during **daytime**, you see what's **outside**. **At night**, the first thing you clearly see is your own **reflection**. Do try this at home😊

   Question: Why? Think and **explain the science behind both cases**.

2. **What can you do to better see what's outside (from inside!) when it's dark?** (you can do three things actually😊 try to guess them all!)
