

Regular Expressions Exercises

What will the following code print?

```
import re
line = "IT 102 students: Alan Jason Farihah Liam William"
results = re.findall('W[a-z]+', line, re.I|re.M)
if results:
    print ("results: ", results)
else:
    print ("Nothing found")
```

Download the first book of the Bible:

http://www.vatican.va/archive/bible/genesis/documents/bible_genesis_en.html and save it as Genesis.txt

Exercises:

1. Search for all words in Genesis that start with capital "G". Note: if you want only unique results, you can convert results to a set:
`results = set(results)`
2. Search for word(s) in Genesis that consist of 15 or more characters. What have you found?
3. Search for word(s) that contain "app" or "comp" substrings. What words have you found?
3. Complete the first three exercises at <http://regex.alf.nu>
