

NAME:

---

**Begin preparing a short presentation, topics distributed in class.**

**Write down your topic HERE:** \_\_\_\_\_

**You will present your topic in two weeks from now, on March 25.** Parents are cordially invited to join the class on that date.

**Your slide is due by email by March 23,** see guidelines below.

**Take your time and do a great (short!) presentation:**

1. 3-5 minutes long (remember, there are several students in the class...)
2. Goal: to research and explain the science behind the phenomenon.
3. **ONLY ONE slide** (.pdf, .doc, .ppt, .pptx)
4. The slide must have a TITLE and your name on it.
5. The slide can include anything relevant; just remember **no overcrowding!**
6. I suggest using ONE or maybe TWO strong pictures and a brief (1-3 sentences) description of the phenomenon.
7. PLEASE EMAIL YOUR SLIDE TO ME by Friday, March 23 afternoon at [kosobokova@gmail.com](mailto:kosobokova@gmail.com) (I want to put them all together in one slide show so we could have a smooth-running *conference*...and I need time to do it! We cannot afford to waste our valuable class time on copying from flash drives...)
8. Prepare and recite your (short) speech! Do not just read from the slide...
9. Any questions are welcome as always.
10. GOOD LUCK with YOUR PRESENTATION!
