## MATH 6: ASSIGNMENT 16. GRAPHS.

Today we discussed plotting graphs of some basic functions. We began with the graphs of standard functions:

Linear function: $y=m x+b$ : The graph of this function is a straight line. The coefficient $m$ is called the slope.

Parabola: $y=x^{2}$ :

Inverse function: $y=1 / x$ :

Having this basic graphs, we can produce new graphs, by doing certain transformations of the equations. Here are some of them; we will discuss more next time.

Vertical translations: Adding constant $c$ to the right-hand side of equation shifts the graph by $c$ units up (if $c$ is positive; if $c$ is negative, it shifts by $|c|$ down.)

## Homework

1. For each of the equations below, draw the graph, then draw the perpendicular line (going through the point $(0,0)$ ) and then write the equation of the perpendicular line
(a) $y=2 x$
(b) $y=3 x$
(c) $y=-x$
(d) $y=-\frac{1}{2} x$

Can you determine the general rule: if the slope of a line is $k$, what is the slope of the perpendicular line?
2. Draw the graphs of the following functions:
(a) $y=2|x|$
(b) $y=|x+1|$
3. (a) Sketch the graphs of functions $y=|x+1|$ and $y=-x+0.25$.
(b) How many solutions do you think this equation has?

$$
|x+1|=-x+0.25
$$

Note: you are not asked to find the solutions just answer how many are there.
4. Find the distance between the following pairs of points in the plane (hint: do you remember the Pythagorean theorem?)
(a) $(0,0)$ and $(1,1)$
(b) $(0,0)$ and $(3,4)$
(c) $(0,0)$ and $(-1,2)$
(d) $(2,2)$ and $(0,6)$
5. Find the equation of the line through $(1,1)$ with slope 2 .
6. Find the equation of the line through points $(1,1)$ and $(3,7)$. [Hint: what is the slope?]
7. Sketch graphs of the following functions:
(a) $y=(x-1)^{2}+1$
(b) $y=\frac{1}{x+2}+1$
(c) $y=\frac{1}{2-x}$
(d) $y=|x|$
(e) $y=|x+1|$
(f) $y=\frac{x+2}{x+1}$
(g) $y=|x+1|+|x-1|$
(h) $y=\left|\frac{1}{x-1}+1\right|$
