1. Present each number as a product of prime factors:
a). $126=$ $\qquad$ b). $520=$ $\qquad$
c). $192=$ $\qquad$ d). $204=$ $\qquad$
e). $108=$ $\qquad$
f). $372=$ $\qquad$
2. Write the following numbers as products of their prime factors:
a). $1001=$ $\qquad$
b). $2002=$ $\qquad$
c). $24024=$ $\qquad$ (divisible by 24 )

## Solve in your notebook grid:

3. Find how many numbers from 1 to 100 are ...
a). ... multiples of 4;
b). ... multiples of 6 ;
c). ... multiples of both 4 and 6 ;
d).* ... not divisible by neither 4 nor 6 .

Present your results as a simplified Venn Diagram. Do not write 100 elements into the diagram, but simply indicate how many elements are in each area.
4. At a bus stop, there are three bus lines. One of them has buses running every 3 minutes, the other has buses running every 5 minutes, and the third one, every 7 minutes. At noon, the buses for all three lines meet at the stop. When will the same thing happen next time?

## 5. Present ...

a). ... numbers 196 and 12 as the products of their prime factors.
b). ... the GCM and GCD of these numbers as the products of their prime factors.
6. A person takes a sheet of paper, and then tears it into 4 pieces; then he picks up one of the pieces and tears it into 4 , and so on. Do you think he will ever get exactly 200 pieces?
7. Using the Sieve of Eratosthenes try to ...
a). ... find all primes between 1-200. [You only need to cross out multiples of numbers up to 15.] Circle them.
b). ... find all pairs of prime numbers that differ by 2 . Such prime numbers are called twins. Examples: 5 and 7; 11 and 13. Double circle them or circle them in green.
