

Multiplication by 0 and 1. Patterns in Multiplication table. Branching Algorithm.

Math 2 Classwork 17

		Warm Up							
	Write down as an algebraic own								
1	Write down as an algebraic expression:								
	a) The "sum of 12 and x":								
	b) "5 less than x":								
	c) The" difference of 10 and x":								
	d) The "20 more than x"								
2	Compare using >, <, or =								
	$4 \times 2 \dots 14 + 14$	$10 \times 17 \dots 17 \times 9$	$35 \times 1 \dots 35 \times 2$						
	$5 \times 2 \dots 5 \times 2 \times 2$	$11 + 11 + 11 \dots 11 \times 7$	$4 \times 5 \dots 2 \times 10$						
	$3 \times 6 \dots 2 \times 9$	$6+6+6+62 \times 12$	$9 imes 4 \dots 7 imes 4$						
3	Calculate without removing parentheses:								
	a) 14 – (4 – 1) =								
	208 - (100 + 8) =								
	444 - (44 + 400) =								
	b) Now remove parenthesis and	calculate:							
	14 - (4 - 1) =								
	208 - (100 + 8) =								
	444 - (44 + 400) =								
	Solve the equations and check the answers.								
4	563 + x = 709	x + 714 = 851	852 - z = 34						
	<i>x</i> =	<i>x</i> =	z =						
		1							

	Lesson 17 Multiplication by 0 and 1. Patterns in Multiplication table. Branching Algorithm.				
	Homework Review				
5	Rewrite the expressions below replacing addition with multiplication where possible.				
5	a) 2 + 2 + 2 + 2 + 2 + 5 =				
	b) 5 + 5 + 5 + 5 + 4 =				
	c) $3 + 3 + 3 + 3 + 3 + 3 + 6 =$				
	d) 7 + 7 + 7 + 3 =				
6	The rectangle below is divided on 7 squares. Find a perimeter of the rectangle if the side of shaded square is 2cm. Find the length and width of the rectangle first. Length = Width = Perimeter =				
	New Material I				
	The "equal groups" (arrays) thinking about multiplication. The equal groups are a way of thinking, whereas repeated addition is a way of doing.				
	Example: $5 \times 7 = 7 \times 5 = 7 + 7 + 7 + 7 + 7 = 5 + 5 + 5 + 5 + 5 + 5 + 5 + 5 + 5 + 5$				

-	by 0 and 1. Patterns in Multiplication table. Branching Algorithm.
7 a) Perform the following operations a	nd write their results:
1 × 2 =	Conclusion : 1 × <i>a</i> =
1 × 3 =	or one group of <i>a</i> equals <i>a</i>
1 × 6 =	
b) Perform the following operations a	and write their results:
0 × 2 =	Conclusion : 0 × <i>a</i> =
0 × 3 =	or zero group of <i>a</i> equals <i>0</i>
0 × 6 =	_
Remember, when we add:	+ + + + + + + + + + + + + + + + + + +
The commutative property of multiplication change the product. When we multiply : $\mathbf{a} \times \mathbf{b} = \mathbf{b} \times \mathbf{a}$	tion says that the order in which we multiply numbers does not 2×4 4×2
a) Use the commutative property of m	nultiplication to evaluate the expressions:
8 $3 \times 1 = 1 \times 3 = $	Conclusion : $a \times 1 =$
$5 \times 1 = 1 \times 5 =$	or <i>a</i> groups of one equals <i>a</i> .
$7 \times 1 = \times = \underline{\qquad}$ $9 \times 1 = \times = \underline{\qquad}$	
b) Use the commutative property of n	nultiplication to evaluate the expressions:
$3 \times 0 = 0 \times 3 =$	Conclusion : $a \times 0 =$
$5 \times 0 = 0 \times 5 = \underline{\qquad}$ $7 \times 0 = \underline{\qquad} \times \underline{\qquad} = \underline{\qquad}$	or <i>a</i> group of zeros equals <i>0</i> .
/ ^ U^	3

9

Multiplication by 0 and 1. Patterns in Multiplication table. Branching Algorithm.

Patterns in Multiplication Table.

Pattern in math is an ordered set of numbers, shapes, or other mathematical objects, arranged according to a rule.

Q1: Find all multiples of 2 in the multiplication table. What do those numbers have in the one's place?

Q2: Find all multiples of 4 in the multiplication table. What do those numbers have in the one's

place? ______ Is there any connection to the multiples of 2?

Q3: Find all multiples of 5 in the multiplication table. What do those numbers have in the one's

place? ______. What is the pattern in the ten's place? ______

Q4: Look at the darker shaded section of the multiplication table (right of the diagonal) and on the lighter shaded section (left of the diagonal). What do you notice? Can the multiplication table be drawn in the form of a triangle?

×	1	2	3	4	5	6	7	8	9	10
1	1	2	3	4	5	6	7	8	9	10
2	2	4	6	8	10	12	14	16	18	20
3	3	6	9	12	15	18	21	24	27	30
4	4	8	12	16	20	24	28	32	36	40
5	5	10	15	20	25	30	35	40	45	50
6	6	12	18	24	30	36	42	48	54	60
7	7	14	21	28	35	42	49	56	63	70
8	8	16	24	32	40	48	56	64	72	80
9	9	18	27	36	45	54	63	72	81	90
10	10	20	30	40	50	60	70	80	90	100

New Material II

Three important characteristics of the algorithm:

- It should be **finite:** If your algorithm never ends when you try to solve a problem, then it is useless.
- It should have well **defined instructions**: Each step of the algorithm has to be precisely defined; **the** instructions should be unambiguously specified for each case.
- It should be **effective:** The algorithm should solve the problem it was designed to solve in the most optimal way.

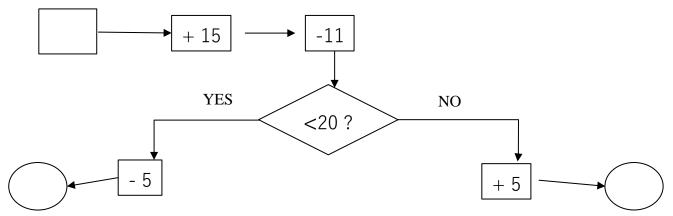

Lesson 17

11

Multiplication by 0 and 1. Patterns in Multiplication table. Branching Algorithm.

Branching Algorithms

10 In a 1st box write any number between 10 and 20 in the square. Then, do the calculations according to the algorithm.

Which of those algorithms are *linear*, or branching, or cyclic? Find the value of x for every a by following each algorithm.
