6 a) Kyle's dog usually eats twice a day. Once the dog lost its appetite and did not eat for 3 days in a row. How many treats did the dog eat that week? $\qquad$
b) A caterpillar climbs a tree. Each day it crawls 2 meters up and each night it crawls 1 m down. How many days will it take to crawl to the top if the tree is 15 m high?
$\qquad$

Look at the table showing how to add numbers from 1 to 3 . Cut out the table and fold it over the dotted line. Notice that the blue squares match up and so do the orange squares. Notice that the squares that match up have the same numbers in them. We say that the squares that match up when you fold along the line are "mirror images" of each other.

Explain why the numbers in the orange squares are equal.

8 The table below shows how to add numbers from 1 to 9 .
Two squares are shaded blue and two are green.

Q: Are the blue squares mirror images (diagonal colored yellow is a "mirror") of each other?
Explain why?

Q: Are the green squares mirror images of each other? Explain why the numbers in the green squares are equal.

Find at least 5 more mirror image squares and shade those pairs with the same color. Why are the mirror image numbers always equal? What is the property of addition did you use?

Daniel has a few boxes with pencils. In each box there are either 3 or 5 pencils.
All boxes are closed and he cannot open them. Answer each question by writing the expression how he can do it.
a) Can he take exactly 29 pencils without opening any boxes?
b) Can he take 14 pencils without opening any boxes?
c) Can he take 31 pencils without opening any boxes?
