

NAME:

Review Classwork #9.

Question: The most prominent constellation of our fall-winter skies is Orion, The Hunter (appearing slightly South-South-West). Its left shoulder is marked by a RED supergiant star called Betelgeuse. Its right foot is marked by a BLUE supergiant star called Rigel.

And of course, everyone knows Polaris The North Star, which is a very bright YELLOW supergiant.

Which of these three stars is:

- a. the HOTTEST?
- b. the COLDEST?
