#### 1. Tropical Depression (Wave)

Lacks structure – no well developed feeder bands or eye.

Not given a name yet.

#### 2. Tropical Storm

Feeder bands are beginning to develop. Eye and eye wall still not well formed.

In the Atlantic, storms are given a name at that stage.

#### 3. Category 1 Hurricane

4. Category 2 Hurricane

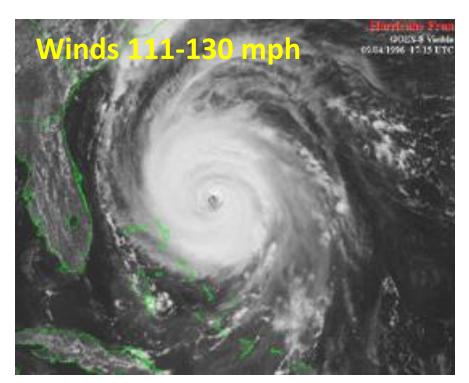

Well developed feeder bands. An eye begins to form.

An eye and eye wall are usually very well formed.

Storm is tightening around center.

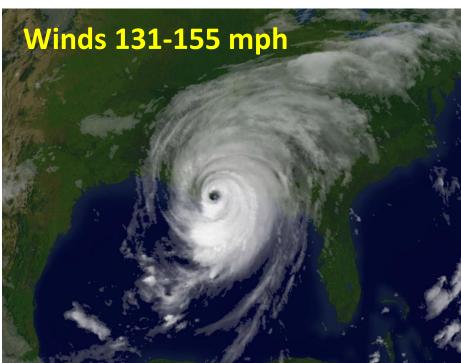

5. Category 3 Hurricane

Now a "Major Storm".

Intense flooding and building damage will occur to most areas on the coast. Further inland, the damage will still be substantial.

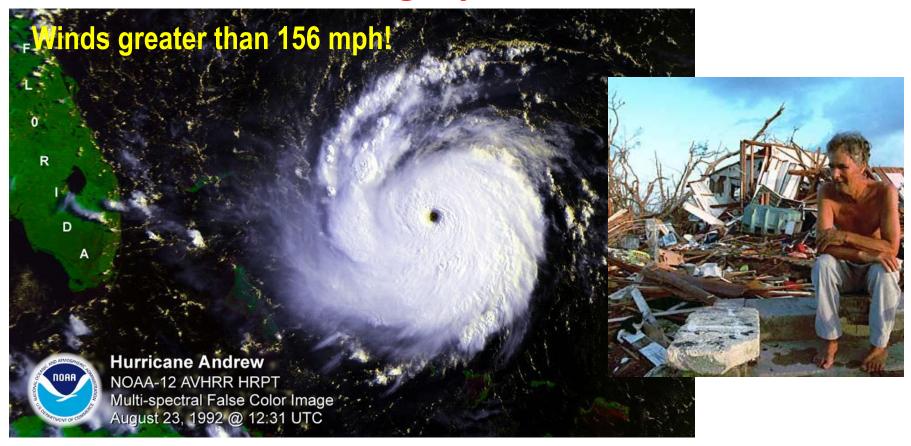

6. Category 4 Hurricane

All shrubs, signs and trees blown down. Extensive damage to doors and windows.

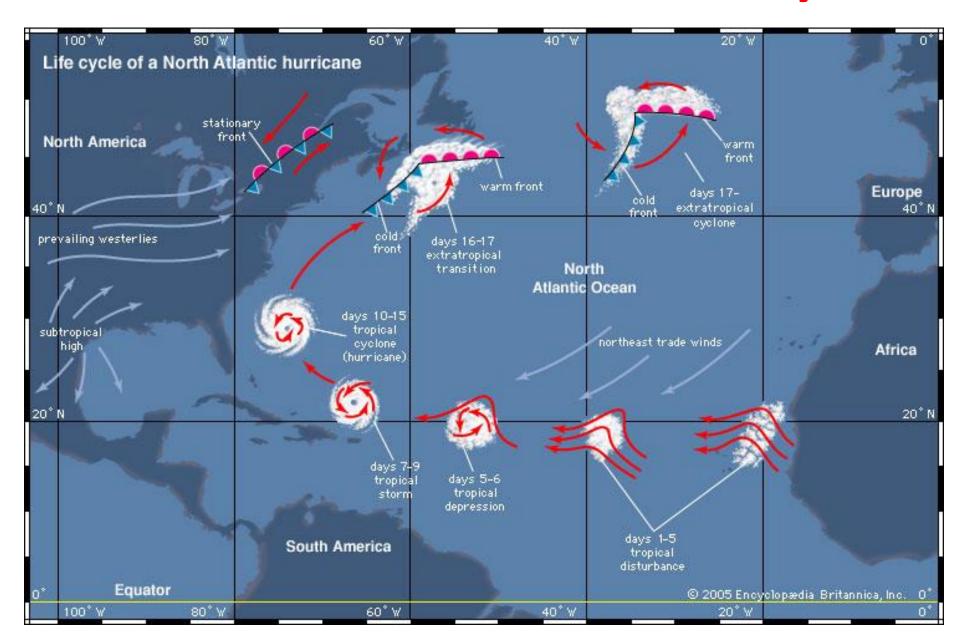

Major damage to lower floors of structures near the coast due to storm surge.

Stage 7 – Category 5 Hurricane

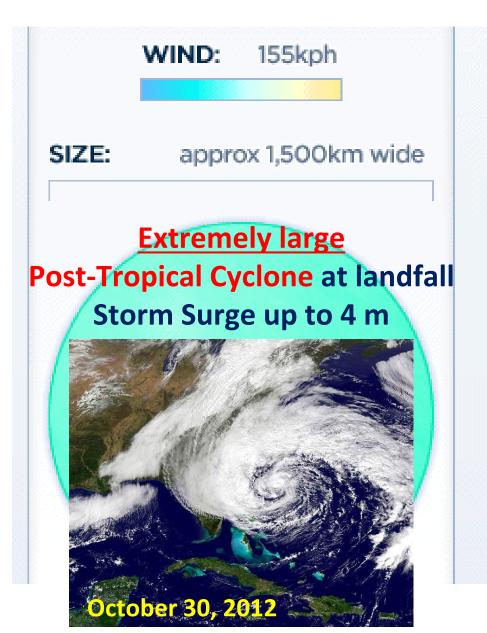

Complete roof failure on many residential and industrial buildings. Some complete building failures. <a href="Massive">Massive</a> evacuation of residential areas on low ground (5-10 miles).

## **North Atlantic Hurricane Lifecycle**

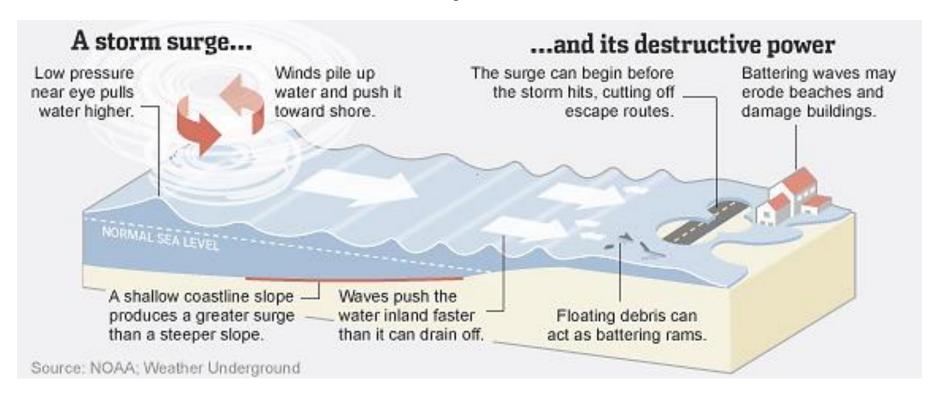

#### **SANDY 2012 vs IRENE 2011**

#### What is Storm Surge?

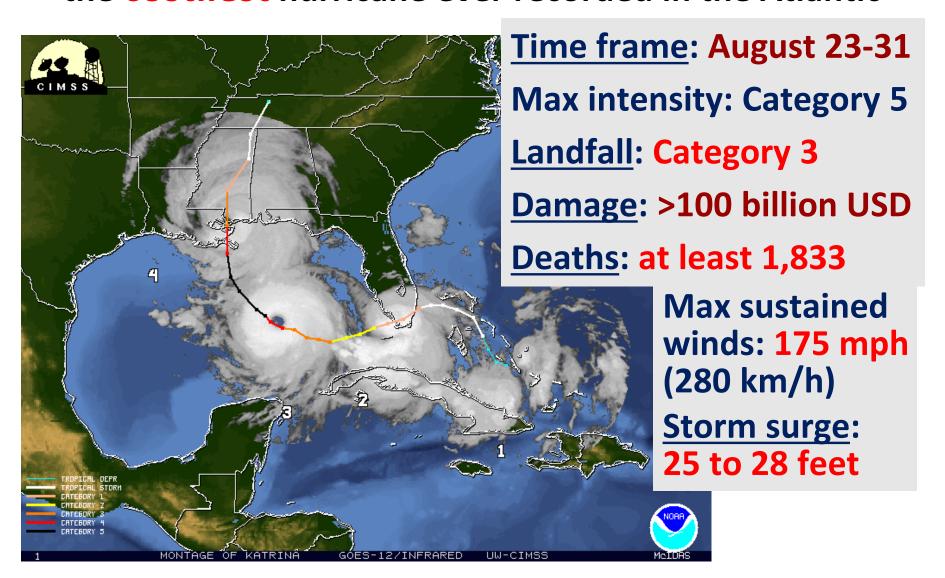

Storm surge is an abnormal rise of water generated by a storm, over and above the predicted astronomical tides.

Important factors: storm intensity (wind speed) and size, forward speed, angle of approach to the coast, central pressure (minimal contribution in comparison to the wind), the coastline shape and bathymetry.

#### Hurricane Katrina, 2005

the costliest hurricane ever recorded in the Atlantic

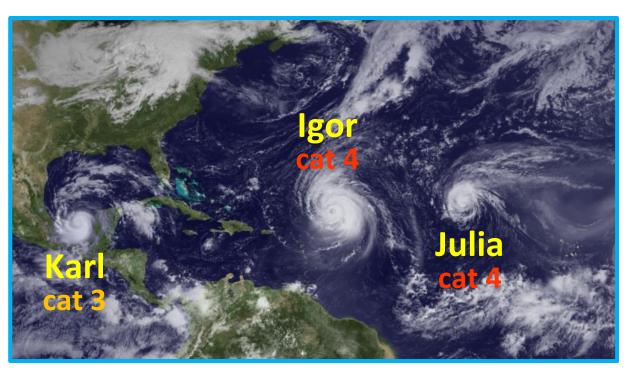

# What are the five costliest hurricanes in the United States?

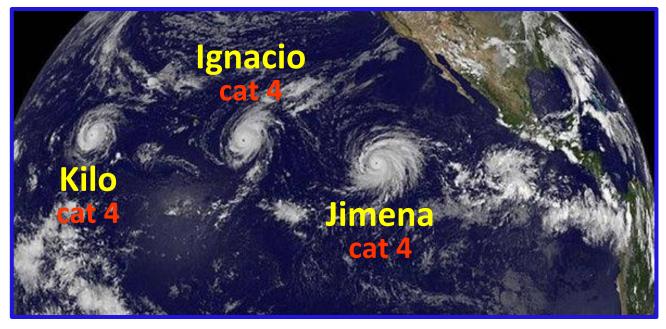

Rank:	Name:	Year:	Cat:	Damage (2015 USD):
1.	Katrina	2005	3*	\$125,000,000,000
2.	Sandy	2012	1*	\$71,400,000,000
3.	Andrew	1992	5	\$43,700,000,000
4.	Ike	2008	2	\$37,500,000,000
5.	Wilma	2005	3	\$25,400,000,000

<sup>\*</sup>Katrina was cat 5 at its peak at sea; Sandy was cat 3.
