

Homework #18 Objects.

Note:

Please, run your code before submitting. If you get an error, try to fix it before submitting your homework. If you get help from anyone, please, make sure that you actually understand the solution.

This homework requires some creativity!

Tasks:

1. Extend the class Dog that we created in classwork with more instance variables (perhaps, describing different characteristics of the dog). Modify `age_in_year()` class method to give the year the dog was born in. Add your own class method (or two, if you feel creative). Try to create a method that uses instance variables you added.

2. Create a new class. It's up to you how to name it and which instance variables to include but, please, make it different from the Dog class. Add at least two class methods to your class.
