

## MATH 9: YEAR END

2021/05/16

I want to get a sense of which topics you feel like you learned the best, and which were the easiest and hardest.

1. Write out, in your own judgment, a list of topics that we covered in this course

Now, use your list to help you answer the following questions.

2. What's something you learned from each topic? Pick up to 5 of the topics on your list (or more if you want to).
3. Which topics do you feel comfortable with?
4. Which topics do you feel uncomfortable with, or uneasy about?
5. Which topics do you want to review, or hear more about?

Based on your answer to the last question, I will talk to you some more about the topics you want to talk about. This will be our last content section, so it is your last chance to review! I have some material prepared myself based on what I think would be useful to talk about, but I will prioritize what you think would be helpful.
