

Chemistry Solutions and their concentrations

04/10/22

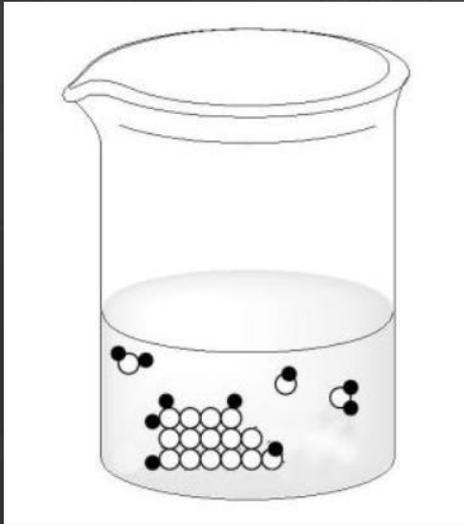

Dissolution, Solutions

- Solution is a special type of homogeneous mixture composed of two or more substances. The most common state of solutions is liquid.
- The composition of a solution can change.
- In a solution a solvent is the one that is taken in a larger quantity and has the same aggregate state as the solution.
- The solute is the substance dissolved in a solvent.
- In the case of water - water is always a solvent.

Solutions, dissolution

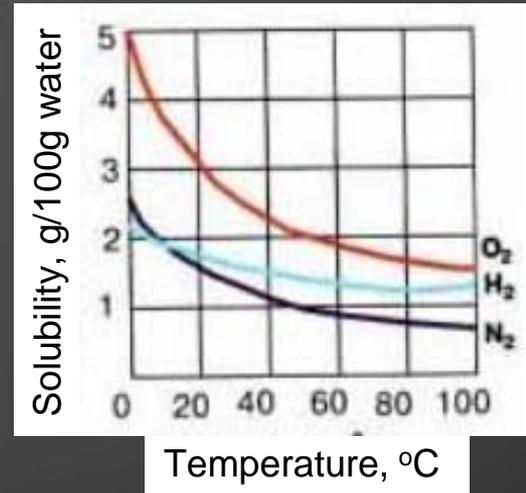

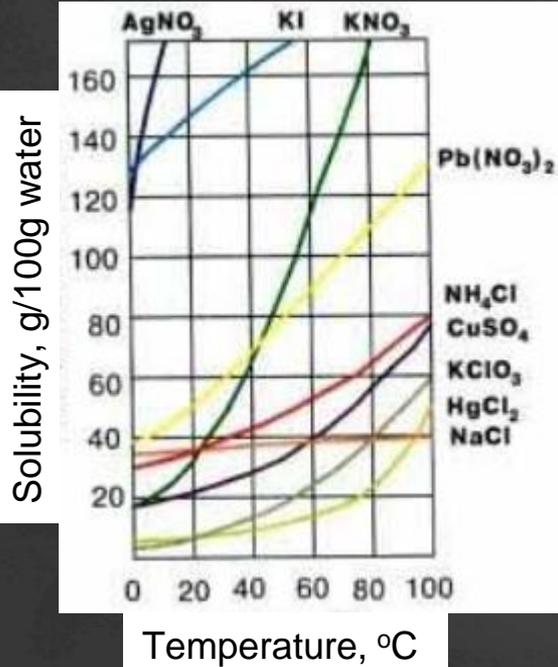

- Solutions can be solid (hydrogen dissolved in metals)
- There are no gas solutions because there are no interactions between gas molecules.

Solutions

- Solution where a given substance cannot dissolve anymore is called saturated (under the given conditions)
 - Solubility is an ability of a substance to dissolve in a solution.
- The measure of solubility is the amount of the substance in its saturated solution

Solution concentration

- Concentration is a relative amount of a solute in a solution
- The **mass fraction** is the ratio of the **mass** of a solute to the **mass** of the **solution**.

Molar concentration is the ratio of amount of solute in moles to the volume in liters

Example - 1

Magnesium Sulfate (25% solution) is used to decrease blood pressure.

This means that 100g solution contains 25 g MgSO_4 . How to prepare such solution?

To prepare such solution we will need to take 25 g and 75 g of water:

$$25 + 75 = 100\text{g}$$

$$\text{Percent concentration: } (25\text{g}/100\text{g}) (\times 100\%) = 25\%$$

Example - 2

Only $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ is available.

We will need to calculate what amount of $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ contains 25 g of MgSO_4 and how much water is in that amount of $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$.

Preparation of the 25% solution with $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ will require less water.

Example 3

Let's consider 1M solution of AgNO_3 . This means that 1L of such solution contains 1 mole of AgNO_3 .

We need to conduct the following reaction:

What volume of 1M NaCl do we need to take to react with 1M solution of AgNO_3 for all the reactants to react fully?

According to the reaction 1 mole of each reacts. For solutions with equal molar concentrations, we need to take equal volumes.

This class uses the materials from the following books:

”

Manyuilov and Rodionov “Chemistry for children and adults”

Kuzmenko, Eremin, Popkov “Beginnings of chemistry”
