## MATH 7: HOMEWORK 20 COORDINATE GEOMETRY: HYPERBOLAS AND PARABOLAS

## **REVIEW OF QUADRATIC EQUATIONS**

Here is what we have learned so far about quadratic equations:

- A quadratic polynomial is an expression of the form  $p(x) = ax^2 + bx + c$ .
- Roots of a quadratic polynomial are numbers such that p(x) = 0. If  $x_1, x_2$  are roots, then  $p(x) = a(x x_1)(x x_2)$ .
- Vietá formulas: If  $x_1, x_2$  are roots of  $x^2 + bx + c$ , then

$$x_1 + x_2 = -b$$
$$x_1 x_2 = c$$

• Completing the square: we can rewrite

(1) 
$$ax^{2} + bx + c = a\left(x + \frac{b}{2a}\right)^{2} - \frac{D}{4a} = a\left(\left(x + \frac{b}{2a}\right)^{2} - \frac{D}{4a^{2}}\right)$$

where  $D = b^2 - 4ac$ .

From this, one gets the **quadratic formula**: if D < 0, there are no roots; if  $D \ge 0$ , then the roots are

$$x_{1,2} = \frac{-b \pm \sqrt{D}}{2a}$$

- If a > 0, then the **smallest** possible value of p(x) is  $-\frac{D}{4a}$ , which happens when  $x = -\frac{b}{2a}$ . In this case the graph is a parabola with branches going up.
- If a < 0, then the **largest** possible value of p(x) is  $-\frac{D}{4a}$ , which happens when  $x = -\frac{b}{2a}$ . In this case the graph is a parabola with branches going down.

## GRAPHS OF QUADRATIC FUNCTIONS

- We know how to draw the graph of  $y = x^2$ . It's a parabola.
- We know that the graph of  $y = x^2 + b$  can be obtained from the graph of  $y = x^2$  by shifting up by b units (or down, if b < 0)
- We know that the graph of  $y = (x + a)^2$  can be obtained from the graph of  $y = x^2$  by shifting *left* by *a* units (or right, if a < 0).
- Based on the two fact above, we can draw a graph of any function of the type  $y = (x + a)^2 + b$ .

We can transform any quadratic function  $y = x^2 + px + q$  to  $y = (x + a)^2 + b$  by completing the square.

## PROPERTIES OF A PARABOLA

A parabola is the set of all points in a plane that are equally distant away from a given point and a given line (see black dotted lines).

This given point is called the **focus** (black dot) of the parabola and the line is called the **directrix** (green line). If the parabola is of the form  $(x-h)^2 = 4p(y-k)$ , the vertex is (h.k), the focus is (h, k+p) and directrix is y = k-p

- 1. For what values of a does the polynomial  $x^2 + ax + 14$  has no roots? exactly one root? two roots?
- **2.** Let  $x_1, x_2$  be the roots of the equation  $x^2 + 3x + 4 = 0$ . Without calculating the roots, find:
  - (a)  $x_1^2 + x_2^2$ (b)  $\frac{1}{x_1^2} + \frac{1}{x_2^2}$
- **3.** A circle with center (3, 5) intersects the y-axis at (0, 1).
  - (a) Find the radius of the circle
  - (b) Find the coordinates of the other point of intersection on the y-axis
  - (c) What are the coordinates of the intersection points of the circle with the x-axis?
- 4. Of all the rectangles with perimeter 4, which one has the largest area? [Hint: if sides of the rectangle are a and b, then the area is A = ab, and the perimeter is 2a + 2b = 4. Thus, b = 2 - a, so one can write A using only a...]
- 5. Prove that for any point P on the parabola  $y = \frac{x^2}{4} + 1$ , the distance from P to the x-axis is equal to the distance from P to the point (0, 2).
- 6. Use completing the square method to draw the following graphs:
  - (a)  $y = x^2 5x + 5$ (b)  $y = x^2 4x + 2$ (c)  $y = x^2 x 1$ (d)  $y = -x^2 + 3x - 0.5$ (e)  $y = x^2 + 4x - 4$
- 7. Graph  $y = (\sqrt{x})^2$ . Note  $x \ge 0$
- 8. A triangle ABC has corners A(-3,0), B(0,3) and (3,0). The line  $y = \frac{1}{3}x + 1$  separates the triangle in 2. What is the area of the piece lying below the line?
- 9. Sketch graphs of the following functions:

(a) 
$$y = (x-1)^2 + 1$$
  
(b)  $y = \frac{1}{x+2} + 1$   
(c)  $y = \frac{1}{2-x}$ 
(d)  $y = \frac{x+2}{x+1}$   
(e)  $y = \left|\frac{1}{x-1} + 1\right|$
