1. Go to <https://www.nist.gov/si-redefinition> to explore latest realization of the SI system! Browse and learn more about history of metric units and how their definition evolved as science progressed.
2. As you read, make a list (in the space provided below) of unfamiliar scientific terms; I expect at least ten of those.
3. You may not have time to study every page of the above website, but make sure to visit <https://www.nist.gov/si-redefinition/meet-constants> to read about the fundamental constants of nature mentioned in the last Lecture.
4. Which fundamental constant is nevertheless somewhat “body part” based? 😊
