

Math 5c, homework 26.

You have an upcoming math test, and it's time to start preparing thoughtfully and consistently.

Please review the following topics:

- Numeral bases
- Probabilities
- Combinatorics
- Inequalities
- Logic word problems
- Sets

To prepare effectively, use your notes, classwork, and homework from previous lessons. The tasks on the test will be very similar to the problems you have already practiced, so focus on understanding the methods and patterns rather than memorizing answers.

Make sure you:

- Revisit solved examples from class
- Practice problems from past homework
- Pay attention to areas where you previously made mistakes
- Ask questions if something is still unclear

Consistent practice will make a big difference. Come prepared and confident.
