

Elements, Compounds, Mixtures

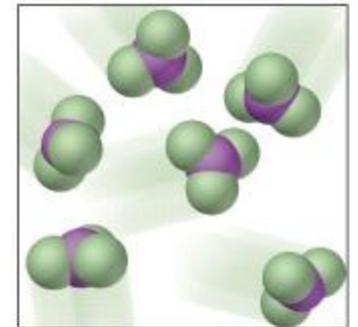

Classification of Substances

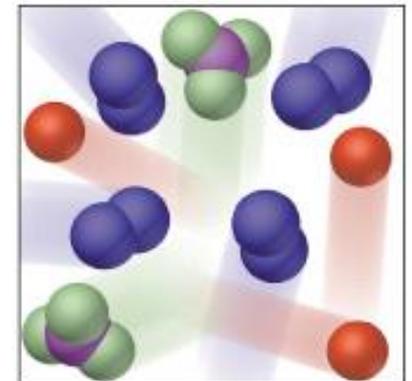

- Elements: substances that are made from **one type of atom** only.
How many types are there?

- Compounds: substances that are made from **more than one** type of atom **chemically bonded** together.

- Mixtures: substances that are made from **more than one** type of atom **combined physically**, but not chemically bonded.

Periodic Table of Elements

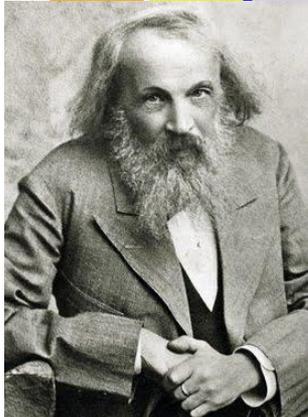

today, there are **118** known elements

Elements and Compounds

- Sodium is an **element**.
- Chlorine is an **element**.
- When **sodium** and **chlorine** **bond** they make up the **compound sodium chloride**, commonly known as **table salt**.

Compounds have *different properties than the elements that make them up:*

for example, table salt has different properties than sodium, an explosive metal, and chlorine, a poisonous gas.

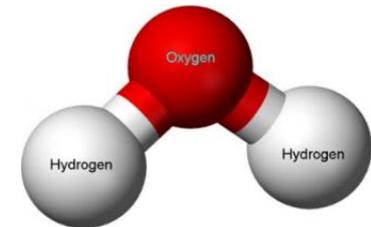

Elements, Compounds, Mixtures

- Hydrogen is an **element**.
- Oxygen is an **element**.
- When **hydrogen** and **oxygen** **bond** they make the **compound water**.
- When **salt** and **water** are **combined**, a **mixture** is created.

**Components in mixtures
retain their individual
properties.**

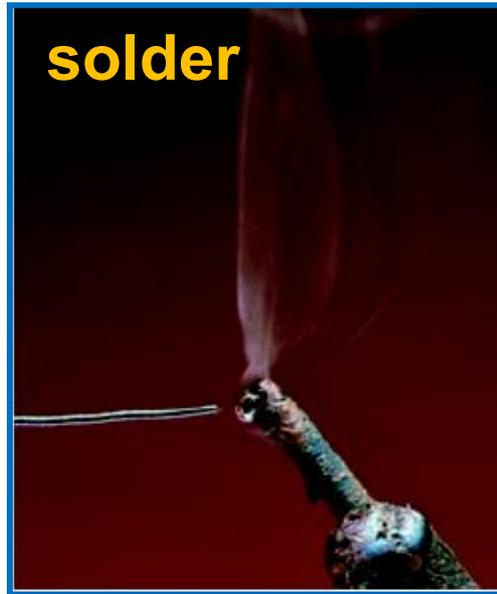

Water is a **compound**

Ocean water is a **mixture**

Types of Mixtures

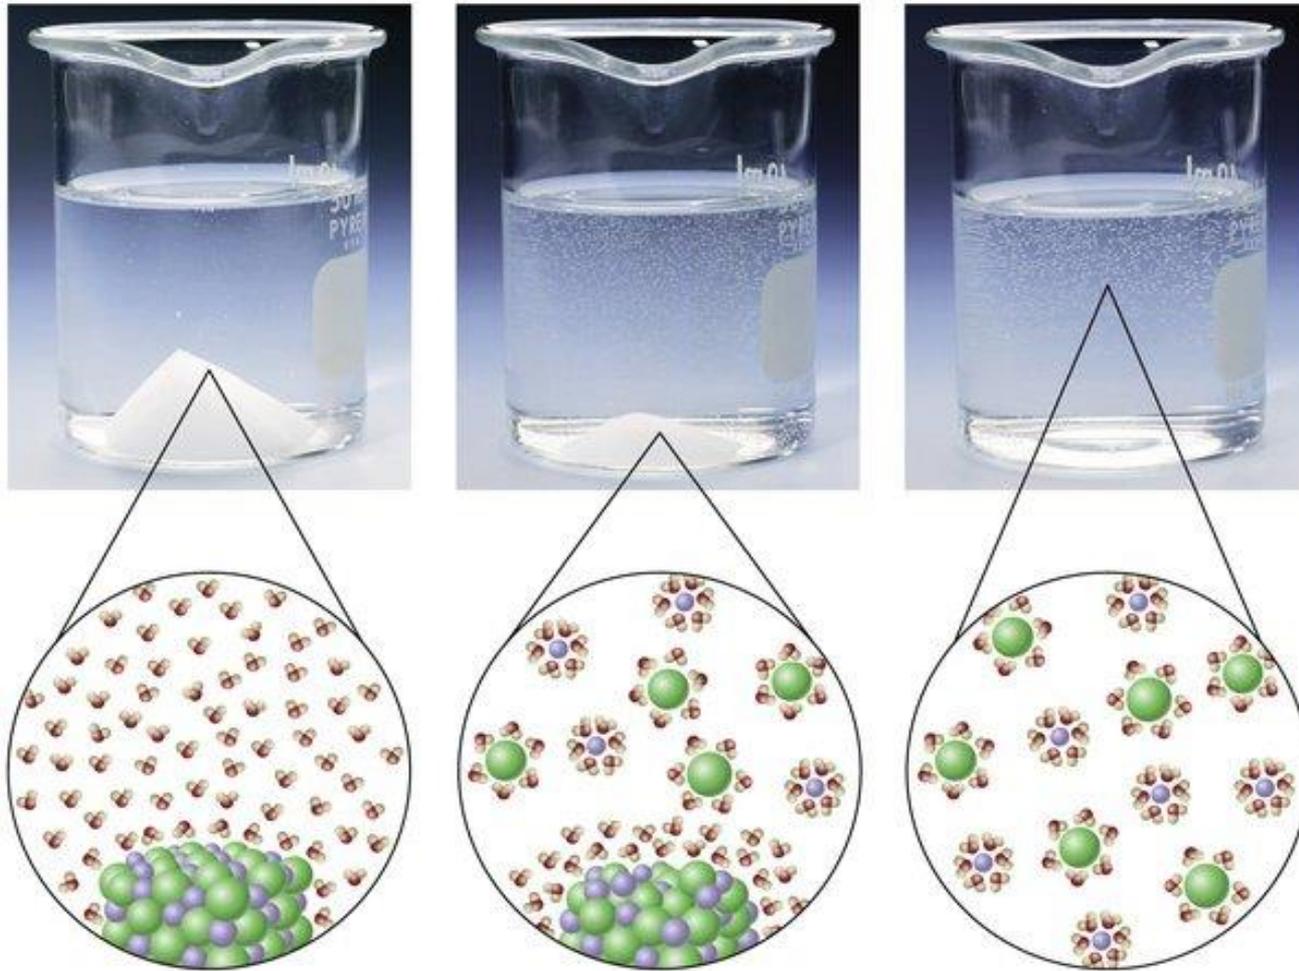

- **Homogeneous** – composition of the mixture is the same throughout; only one state of matter is present.

- **Heterogeneous** – composition is not uniform throughout.

Example: Salt Dissolving in Water

a homogeneous (uniform) MIXTURE is created

Element, Compound, or Mixture?

Pure Water

Copper

Diamond

Jelly Beans

Element, Compound, or Mixture?

Rocks

Neon Gas

Table Sugar

Sweet Tea
